Life After Linkage

Inference with Many Messy Datasets

Slides available at http://bit.ly/kaplan-ncsu-2018

Outline

1. Record linkage and the downstream task
   Very brief literature review and pictures. (Please do the literature review in 1-2 slides).

2. Linear regression/binary classification
   Your approach via prototyping. Make this very high level. (Put all technical details in the backup slides).

3. Population size estimation
   Here, I would start with just the simulation studies. If you get something on the real results for SV, add this in.

4. Other work

Thank you
